

# Parabeln

G.Roofls

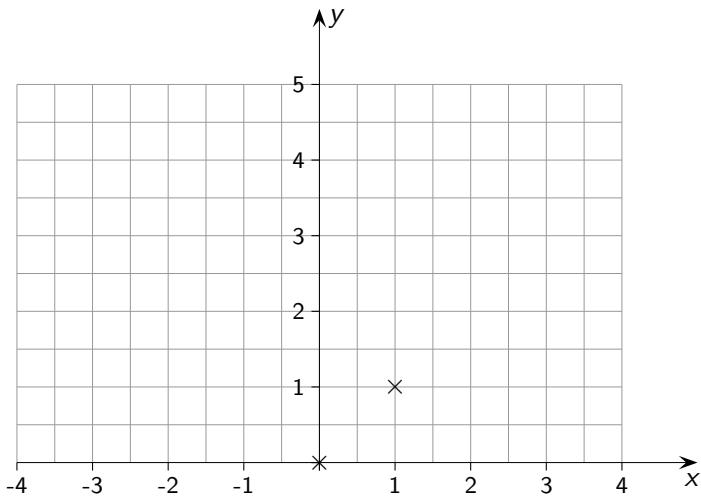

Zeichne die Parabel  $y = x^2$ .

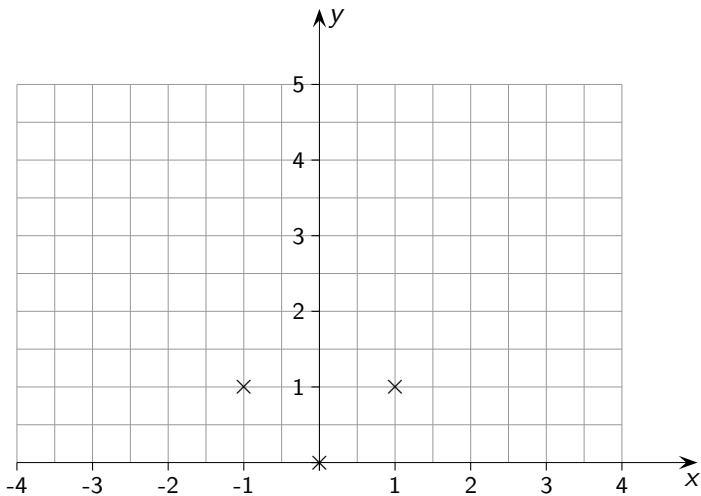

Zeichne die Parabel  $y = x^2$ .

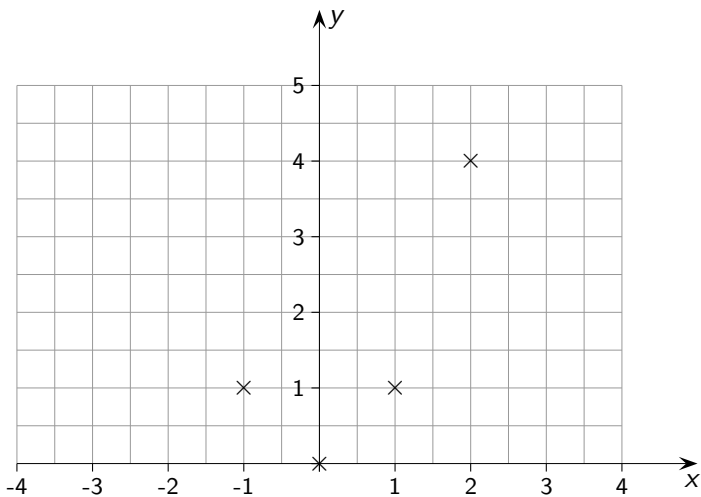

Zeichne die Parabel  $y = x^2$ .

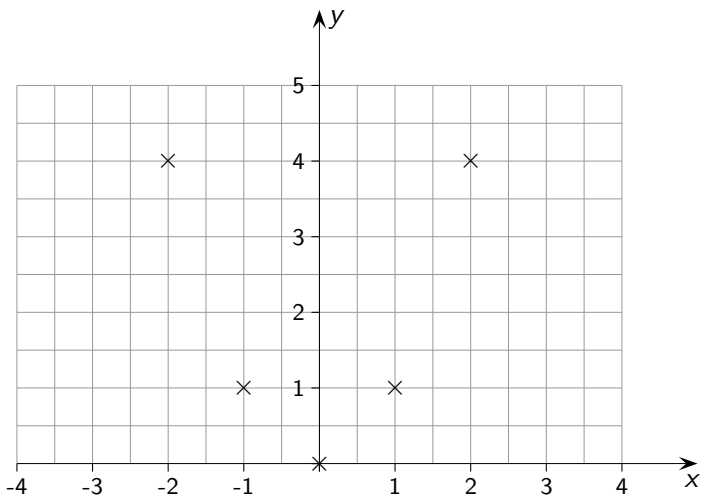

Zeichne die Parabel  $y = x^2$ .

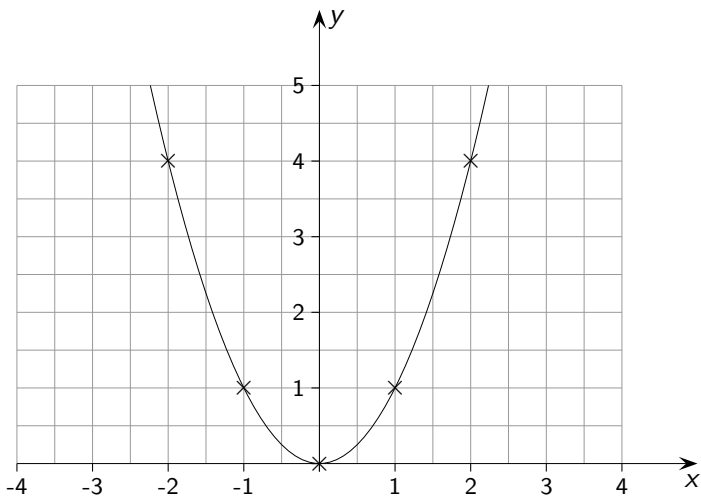

Zeichne die Parabel  $y = x^2$ .

Zeichne die Parabel  $y = x^2$ .

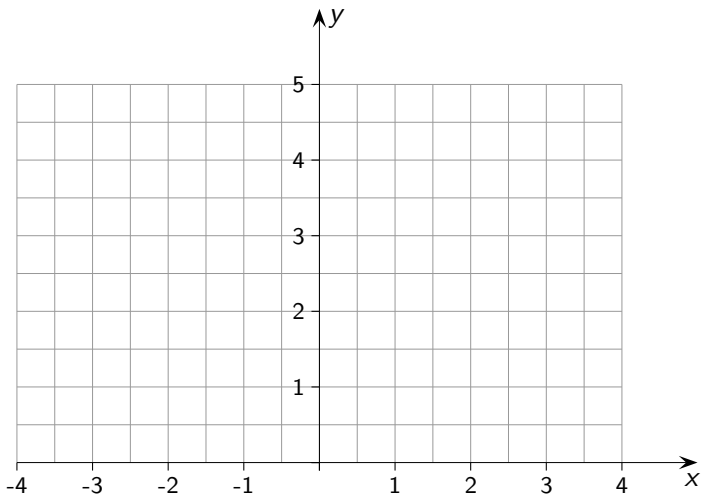

Zeichne die Parabel  $y = x^2$ .

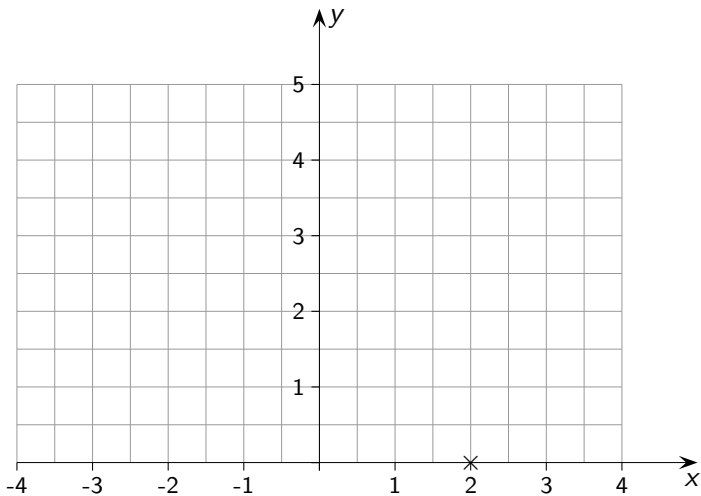

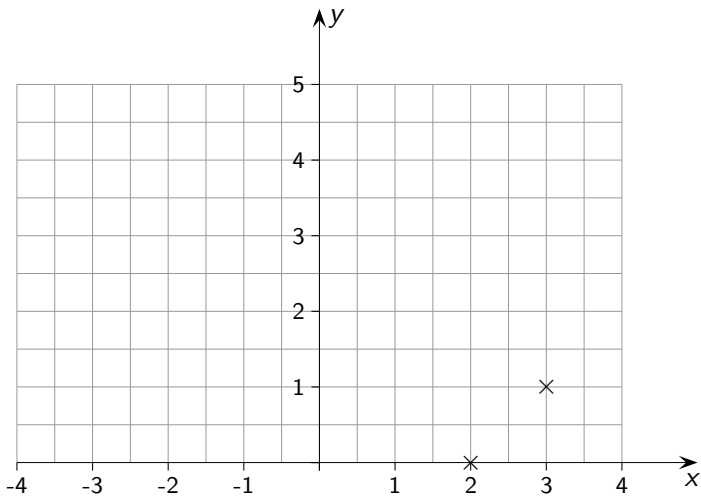

Zeichne die Parabel  $y = (x - 2)^2$ .

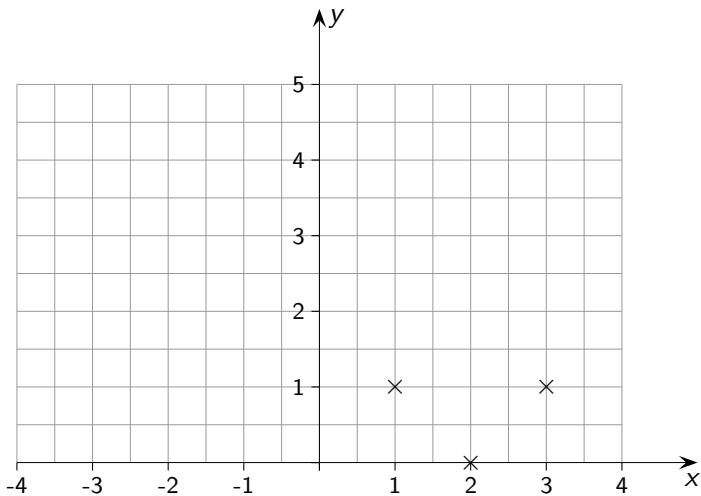

Zeichne die Parabel  $y = (x - 2)^2$ .

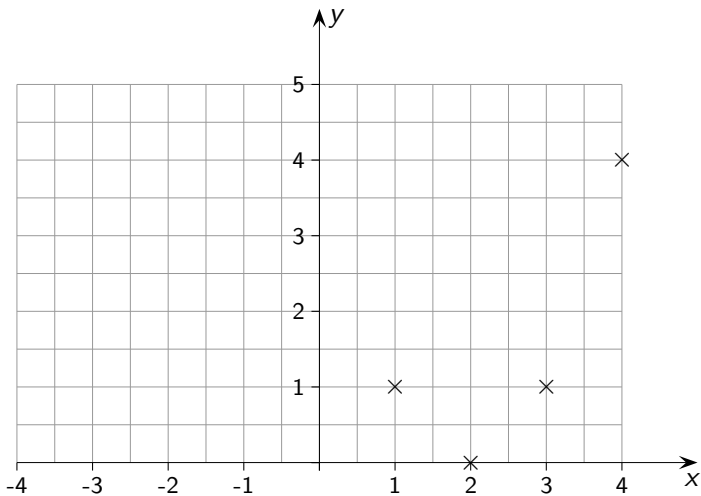

Zeichne die Parabel  $y = (x - 2)^2$ .

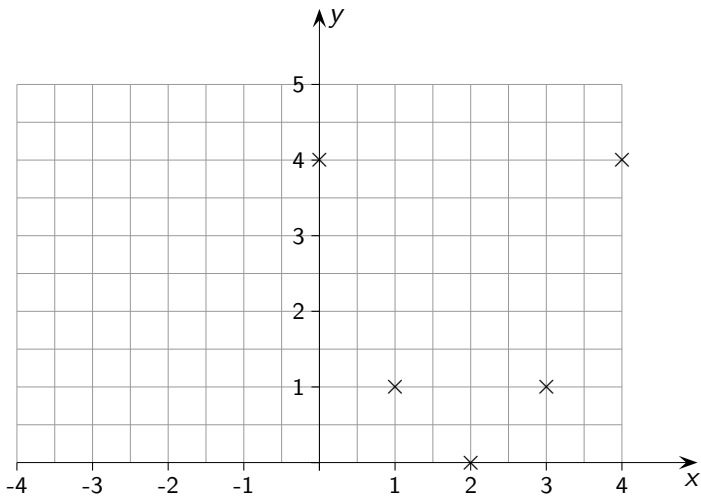

Zeichne die Parabel  $y = (x - 2)^2$ .

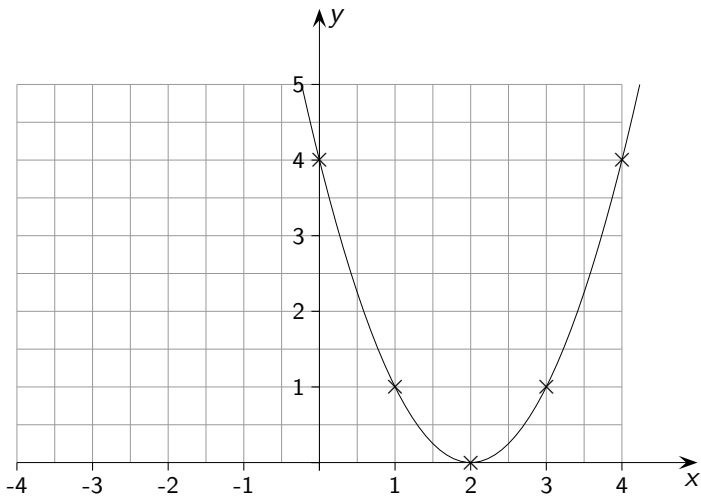

Zeichne die Parabel  $y = (x - 2)^2$ .

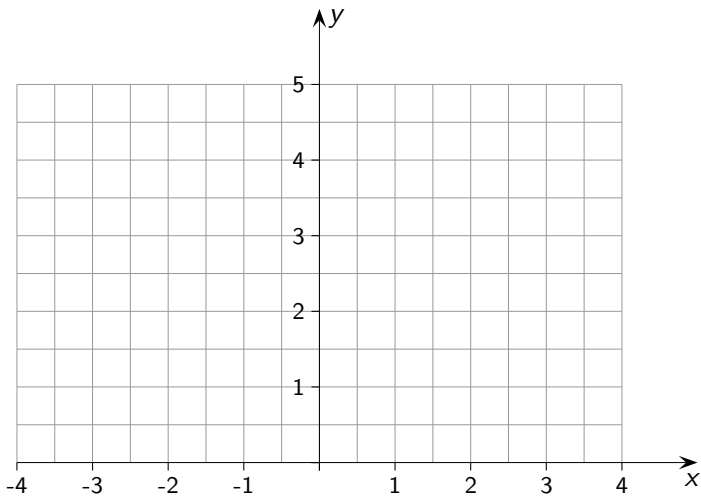

Zeichne die Parabel  $y = (x - 2)^2$ .

Zeichne die Parabel  $y = (x - 2)^2$ .

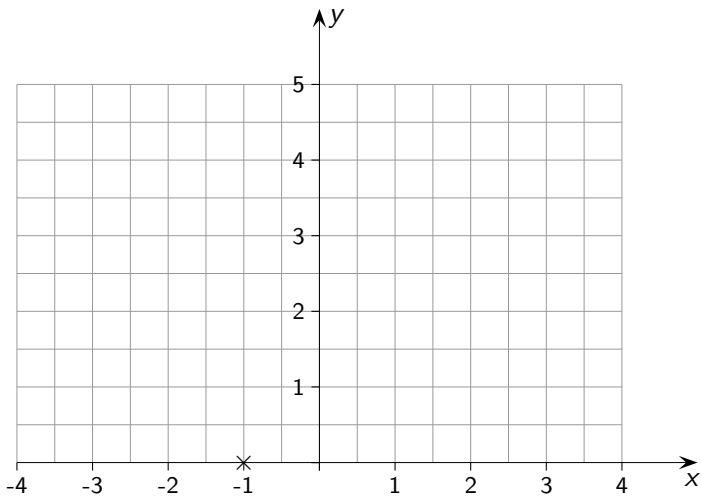

Zeichne die Parabel  $y = (x + 1)^2$ .

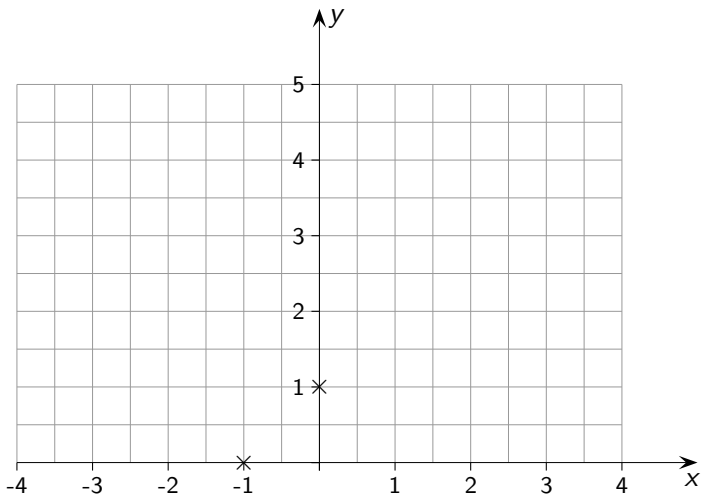

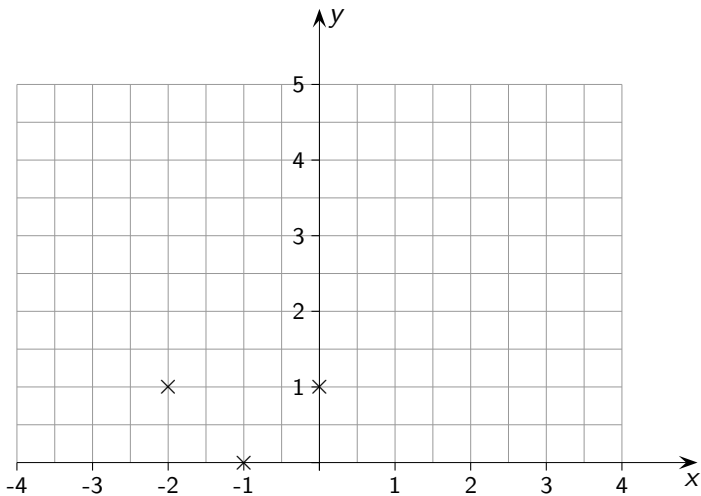

Zeichne die Parabel  $y = (x + 1)^2$ .

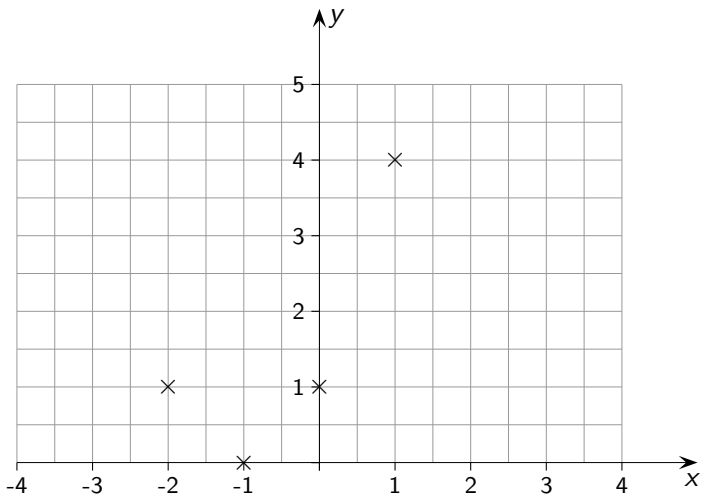

Zeichne die Parabel  $y = (x + 1)^2$ .

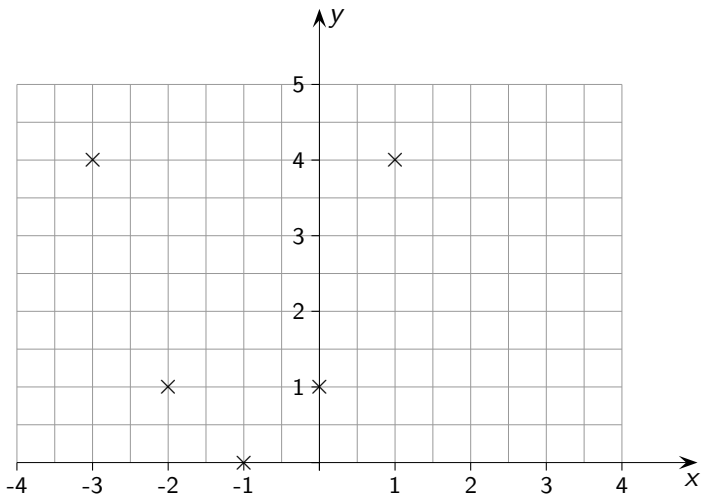

Zeichne die Parabel  $y = (x + 1)^2$ .

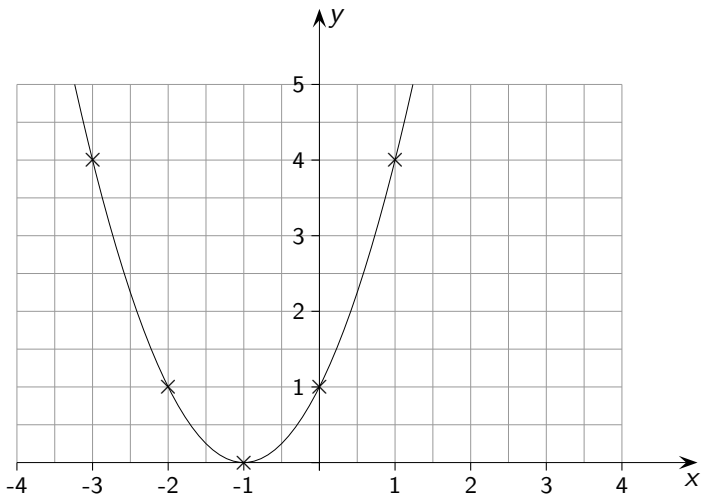

Zeichne die Parabel  $y = (x + 1)^2$ .

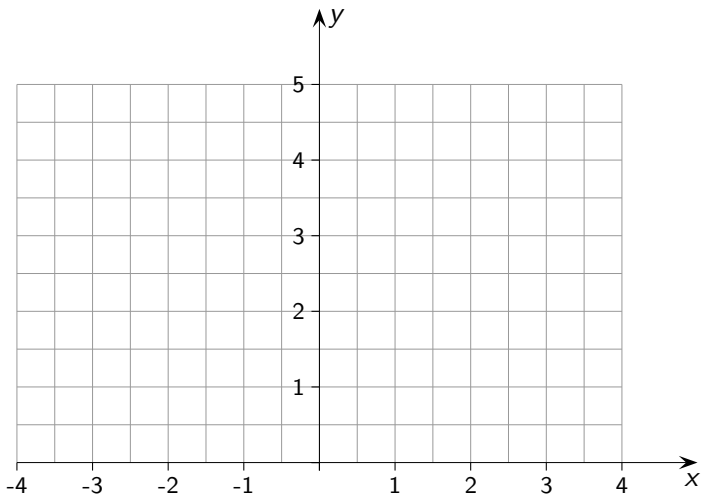

Zeichne die Parabel  $y = (x + 1)^2$ .

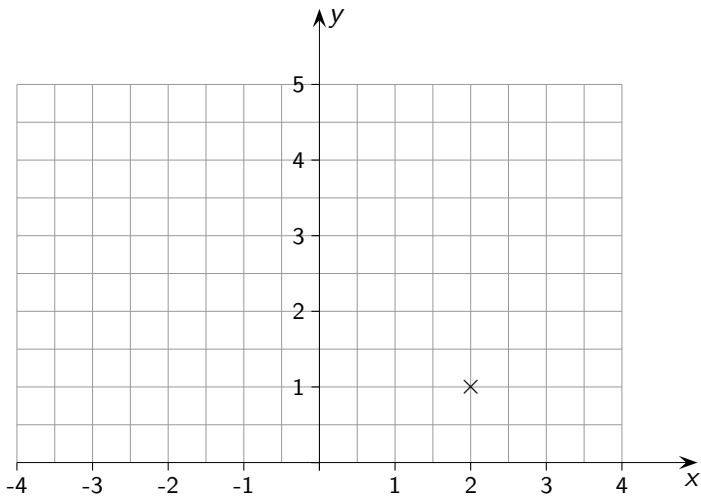

Zeichne die Parabel  $y = (x + 1)^2$ .

Zeichne die Parabel  $y = (x - 2)^2 + 1$ .

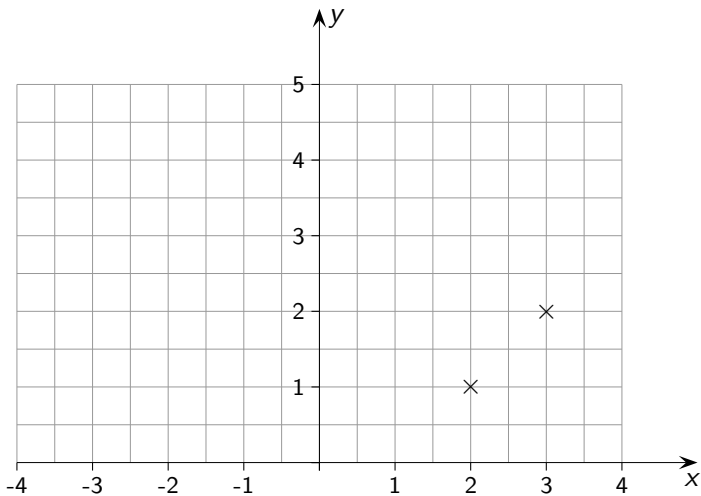

Zeichne die Parabel  $y = (x - 2)^2 + 1$ .

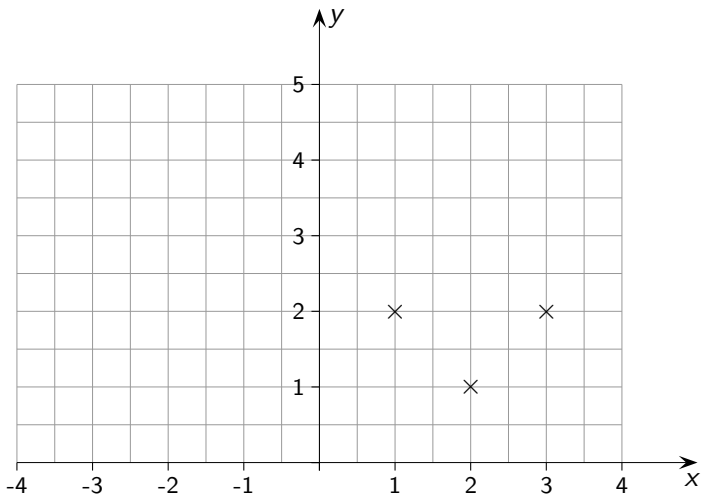

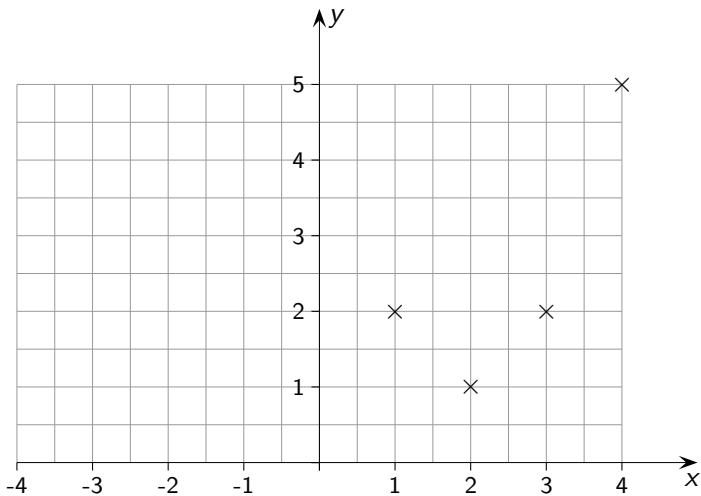

Zeichne die Parabel  $y = (x - 2)^2 + 1$ .

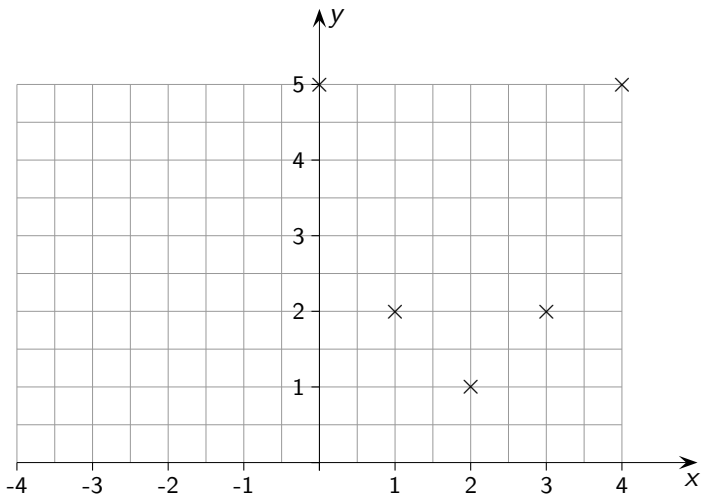

Zeichne die Parabel  $y = (x - 2)^2 + 1$ .

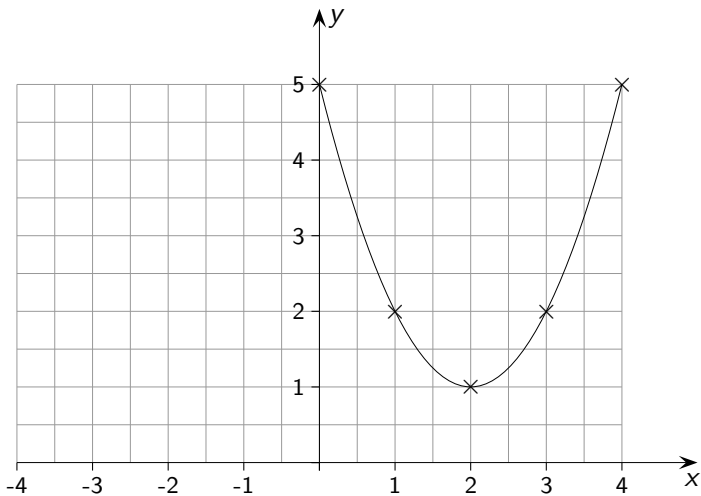

Zeichne die Parabel  $y = (x - 2)^2 + 1$ .

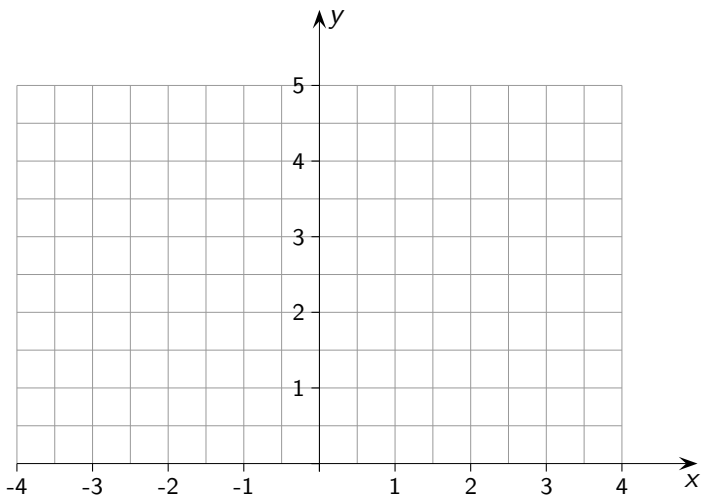

Zeichne die Parabel  $y = (x - 2)^2 + 1$ .

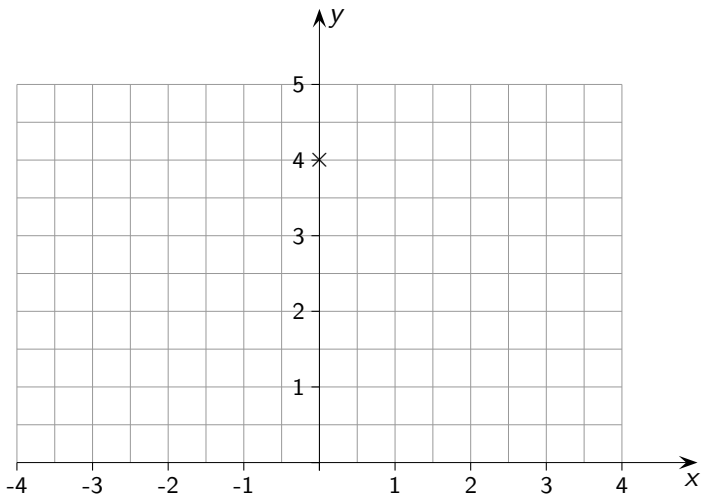

Zeichne die Parabel  $y = (x - 2)^2 + 1$ .

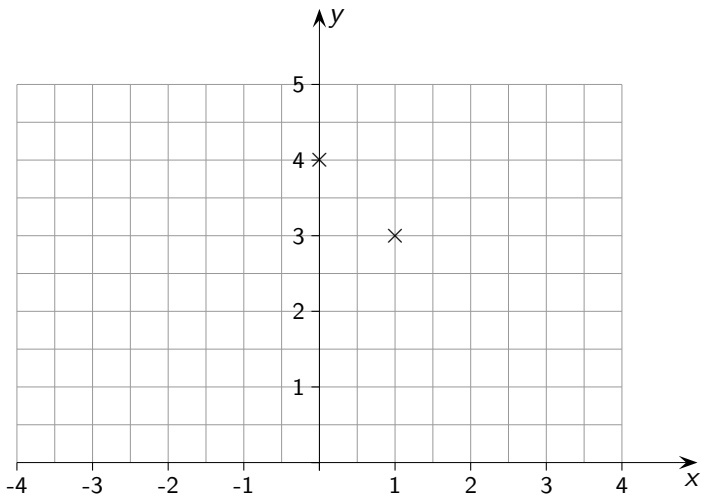

Zeichne die Parabel  $y = -x^2 + 4$ .

Zeichne die Parabel  $y = -x^2 + 4$ .

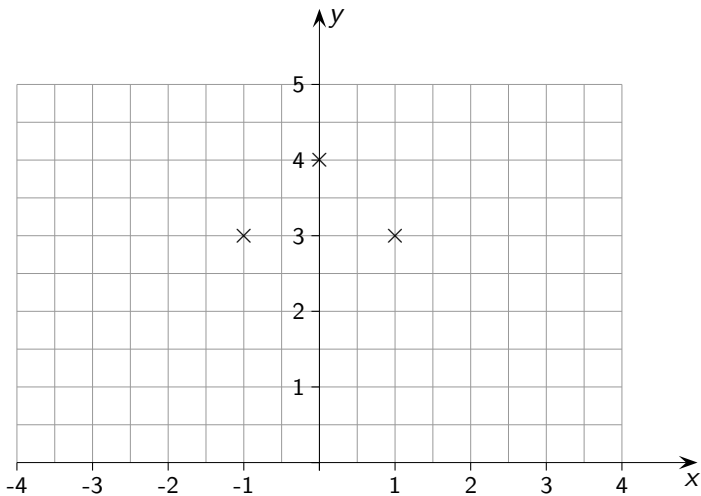

Zeichne die Parabel  $y = -x^2 + 4$ .

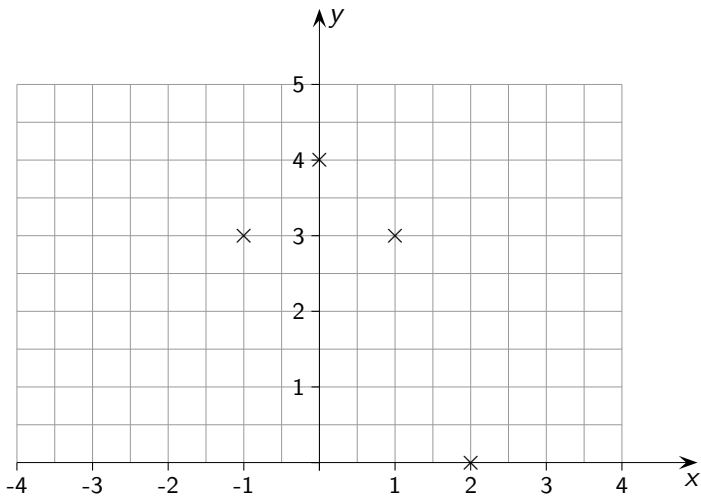

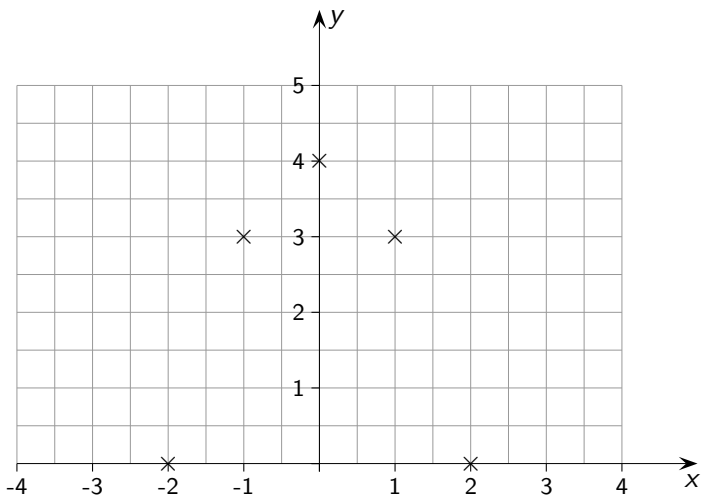

Zeichne die Parabel  $y = -x^2 + 4$ .

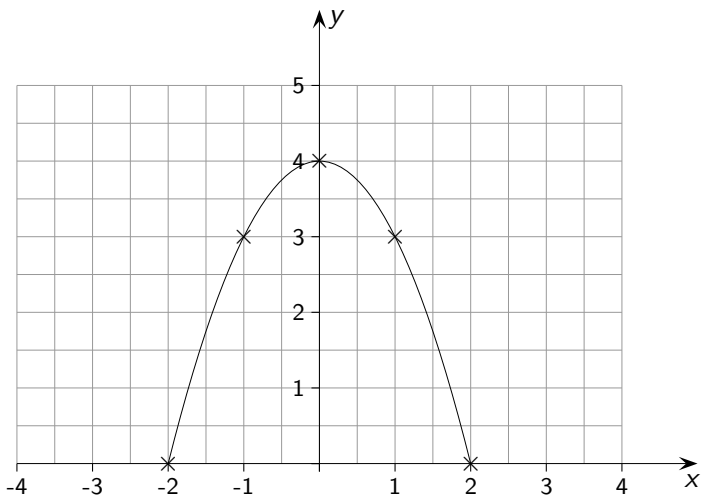

Zeichne die Parabel  $y = -x^2 + 4$ .

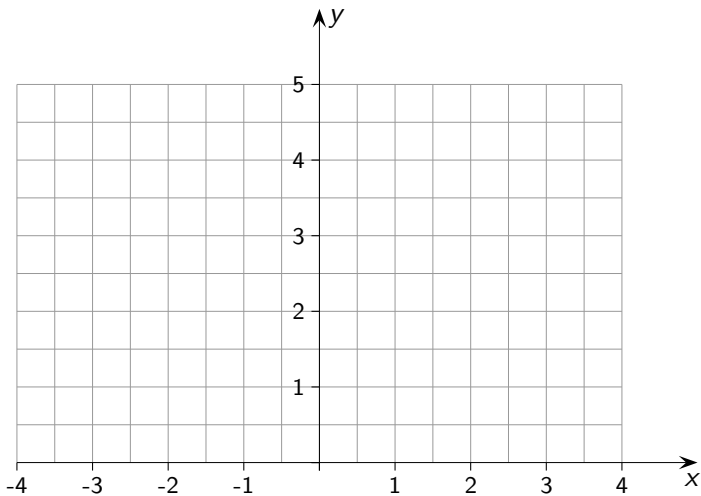

Zeichne die Parabel  $y = -x^2 + 4$ .

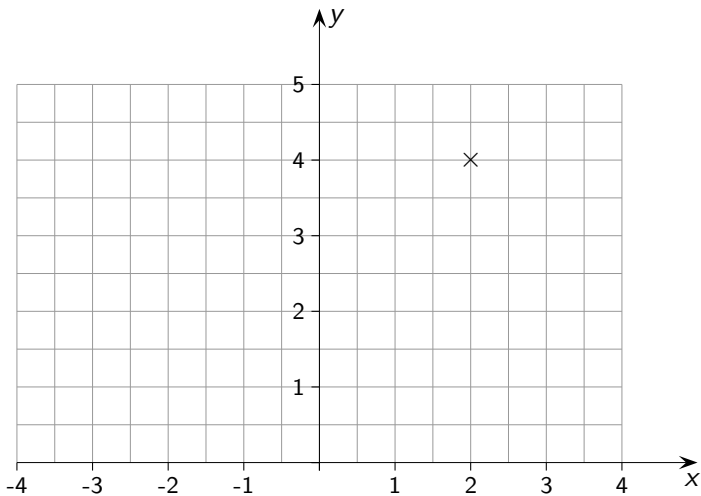

Zeichne die Parabel  $y = -x^2 + 4$ .

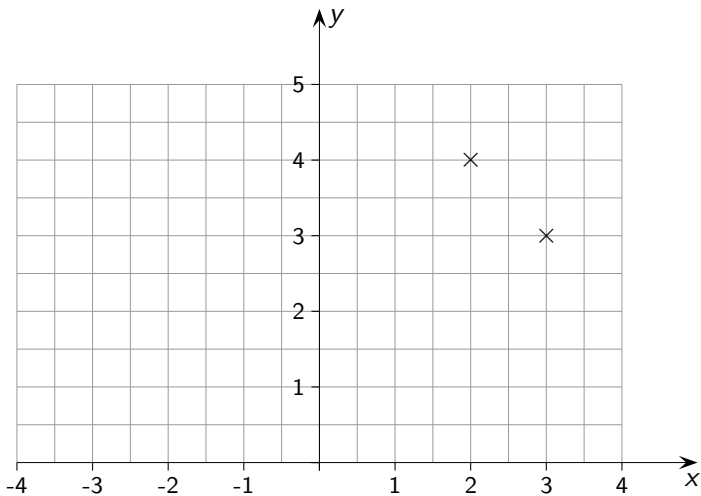

Zeichne die Parabel  $y = -(x - 2)^2 + 4$ .

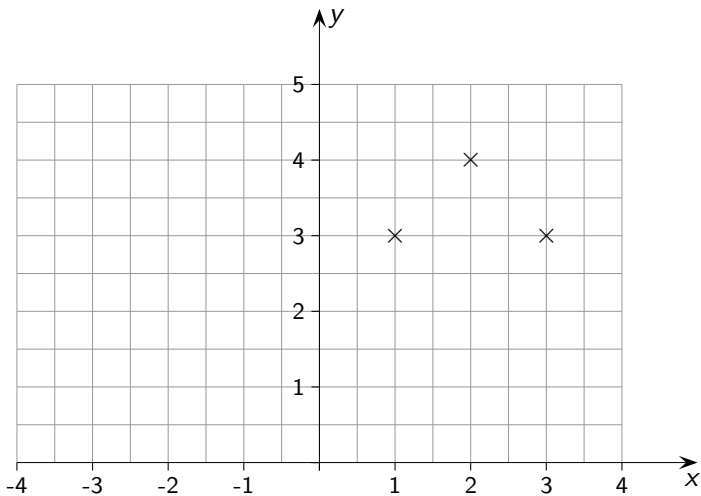

Zeichne die Parabel  $y = -(x - 2)^2 + 4$ .

Zeichne die Parabel  $y = -(x - 2)^2 + 4$ .

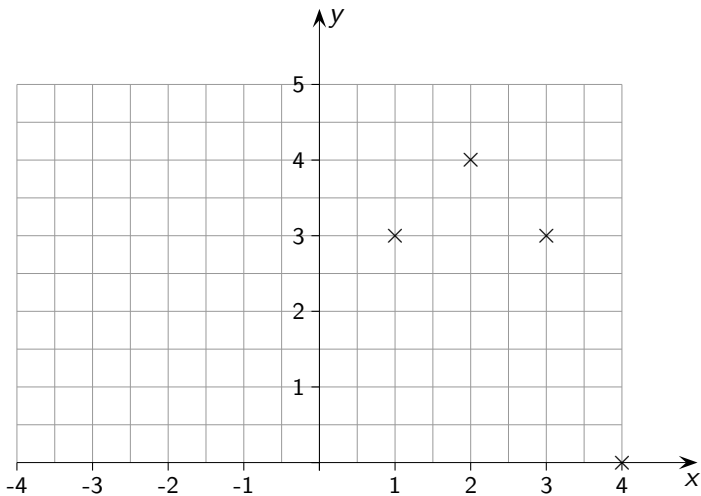

Zeichne die Parabel  $y = -(x - 2)^2 + 4$ .

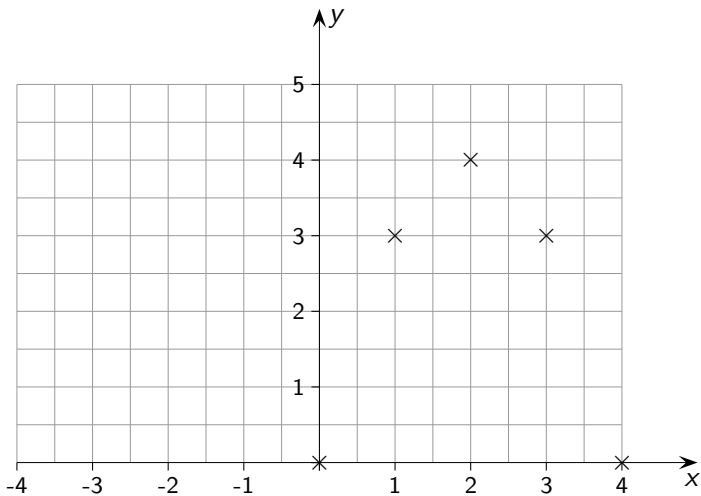

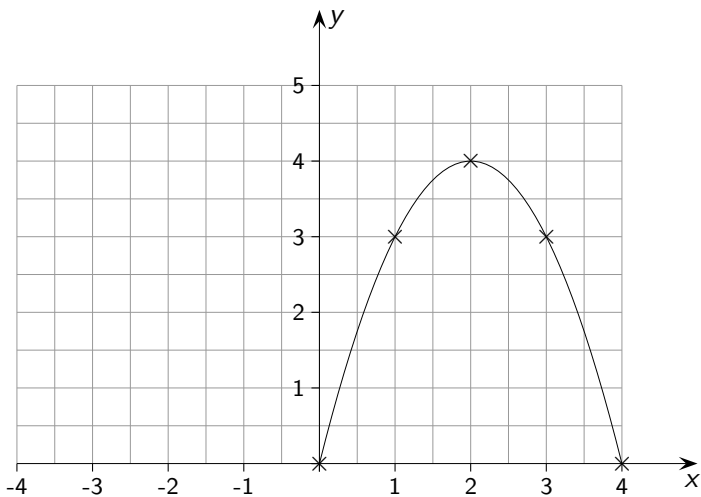

Zeichne die Parabel  $y = -(x - 2)^2 + 4$ .

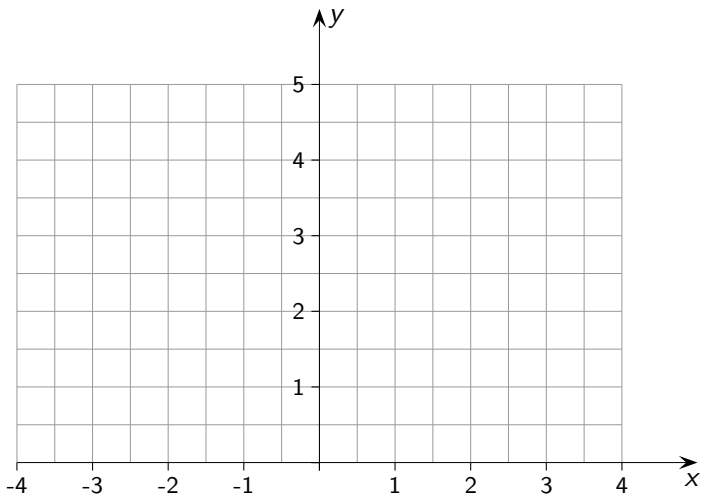

Zeichne die Parabel  $y = -(x - 2)^2 + 4$ .

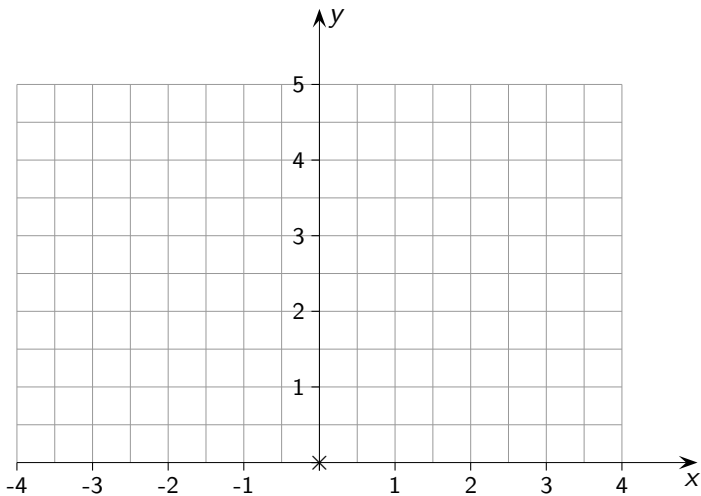

Zeichne die Parabel  $y = -(x - 2)^2 + 4$ .

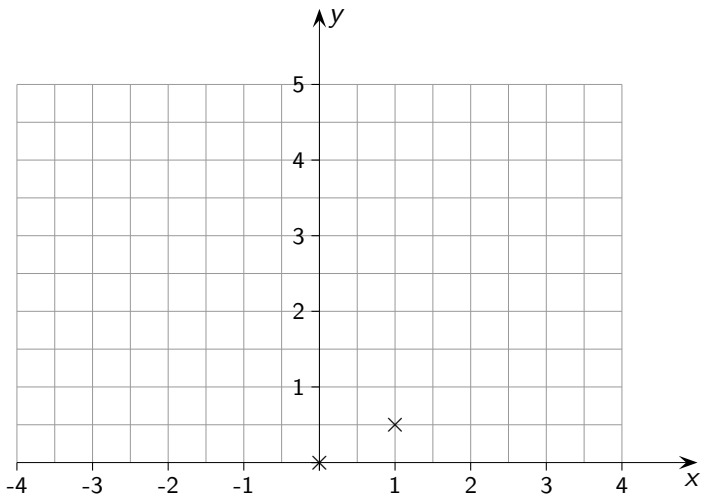

Zeichne die Parabel  $y = \frac{1}{2}x^2$ .

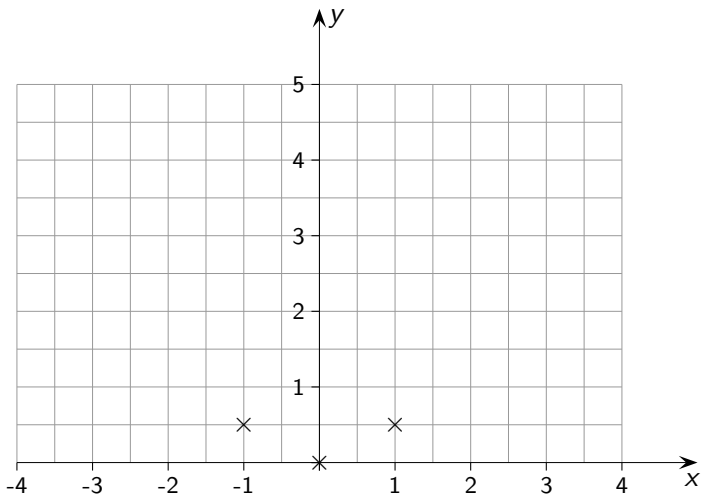

Zeichne die Parabel  $y = \frac{1}{2}x^2$ .

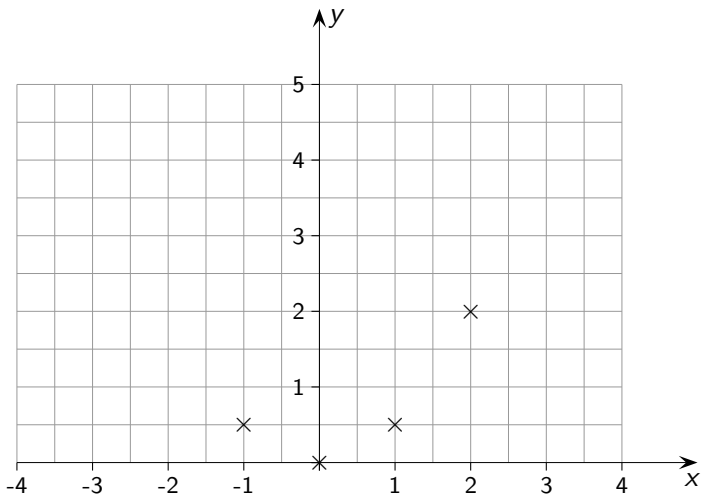

Zeichne die Parabel  $y = \frac{1}{2}x^2$ .

Zeichne die Parabel  $y = \frac{1}{2}x^2$ .

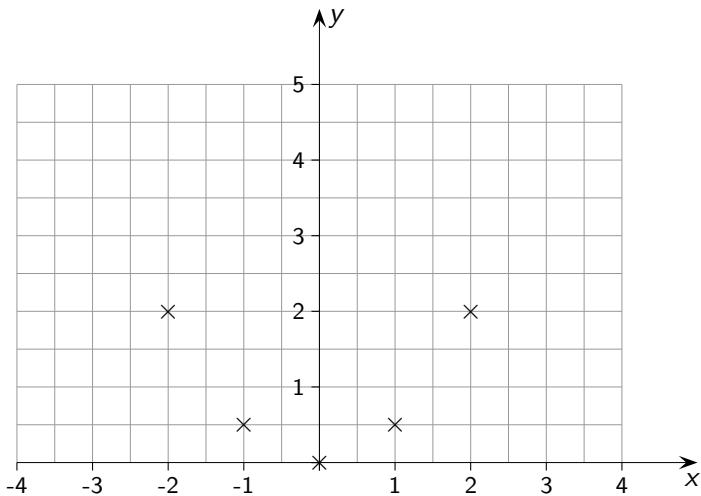

Zeichne die Parabel  $y = \frac{1}{2}x^2$ .

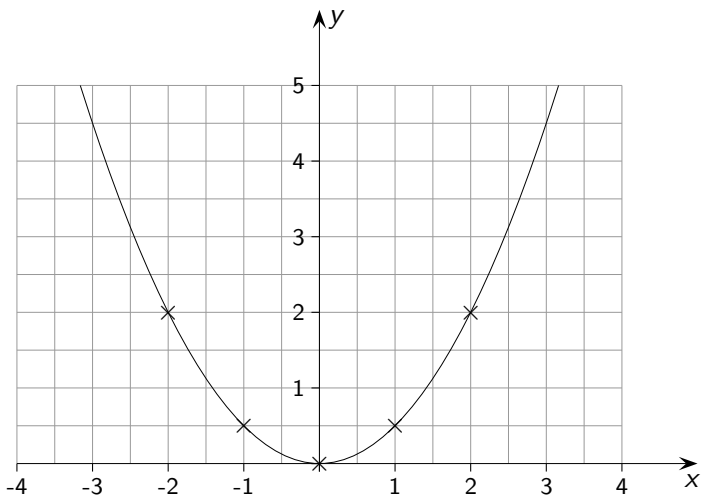

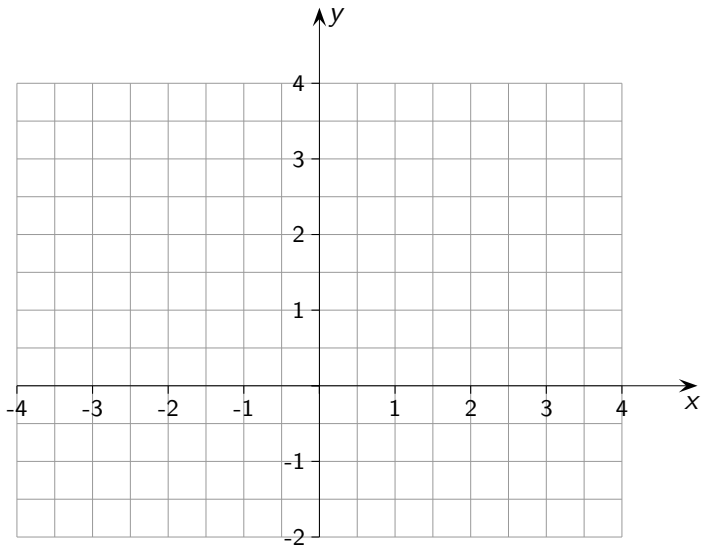

Zeichne die Parabel  $y = \frac{1}{2}x^2$ .

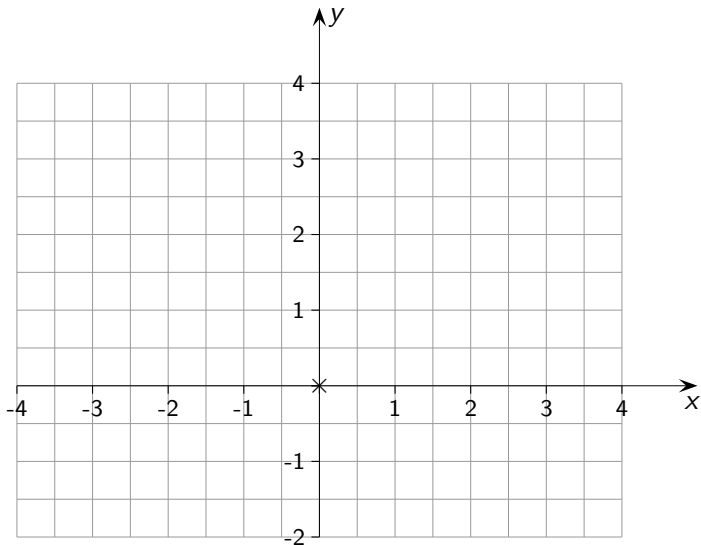

Zeichne die Parabel  $y = \frac{1}{2}x^2$ .

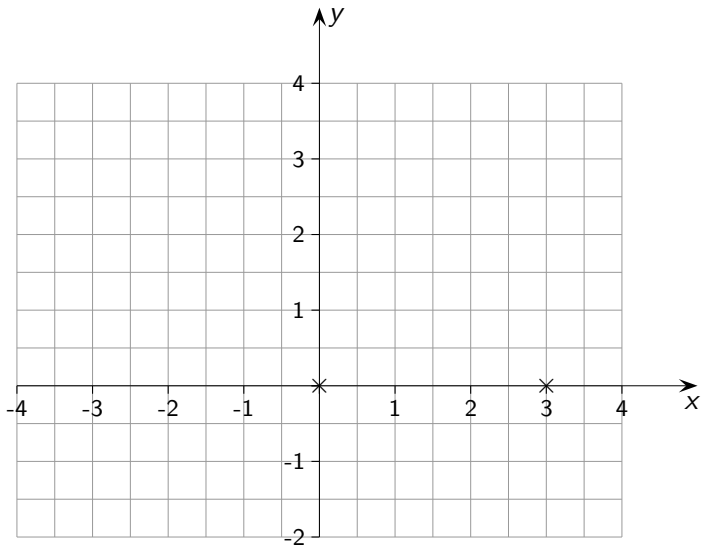

Zeichne die Parabel  $y = x^2 - 3x$ .

Zeichne die Parabel  $y = x^2 - 3x$ .

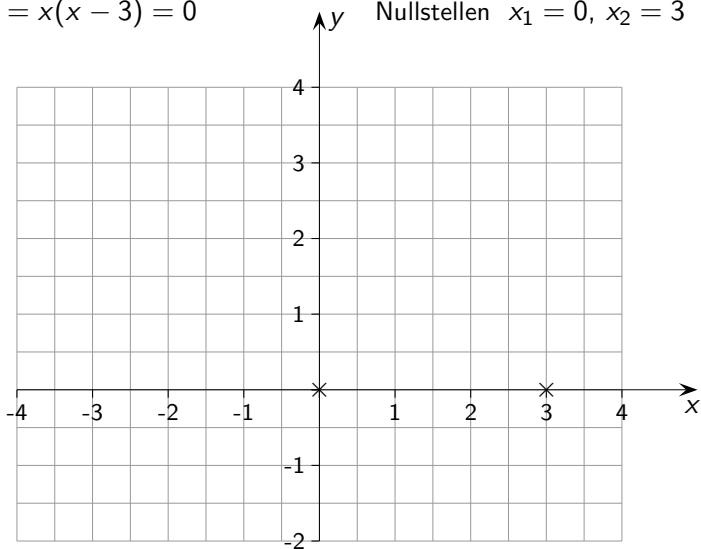

Zeichne die Parabel  $y = x^2 - 3x$ .

Zeichne die Parabel  $y = x^2 - 3x$ .

$$x^2 - 3x = x(x - 3) = 0$$

Nullstellen  $x_1 = 0, x_2 = 3$

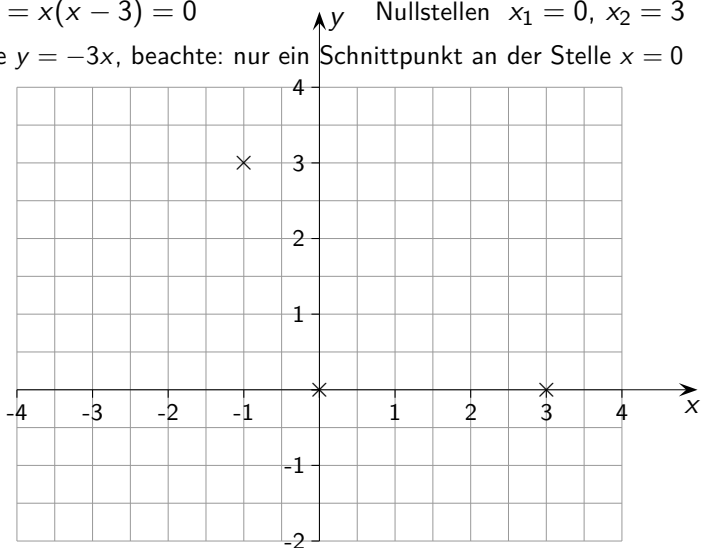

Zeichne die Parabel  $y = x^2 - 3x$ .

$$x^2 - 3x = x(x - 3) = 0$$

Tangente  $y = -3x$ , beachte: nur ein Schnittpunkt an der Stelle  $x = 0$

Nullstellen  $x_1 = 0, x_2 = 3$

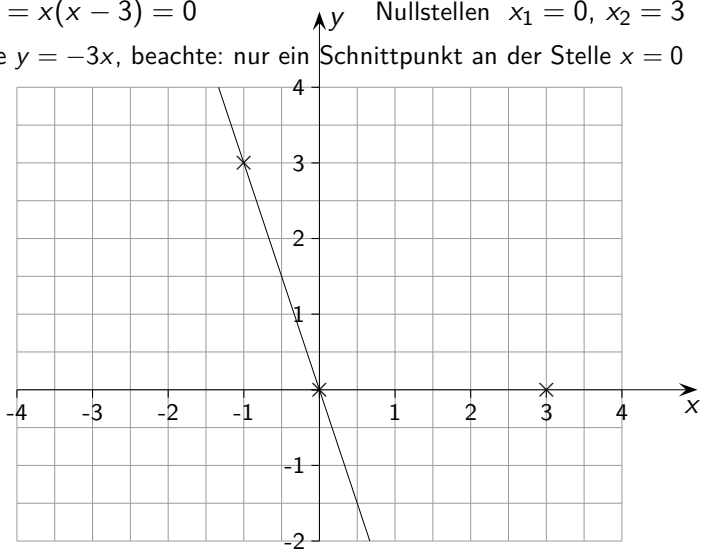

Zeichne die Parabel  $y = x^2 - 3x$ .

$$x^2 - 3x = x(x - 3) = 0$$

Tangente  $y = -3x$ , beachte: nur ein Schnittpunkt an der Stelle  $x = 0$

Nullstellen  $x_1 = 0, x_2 = 3$

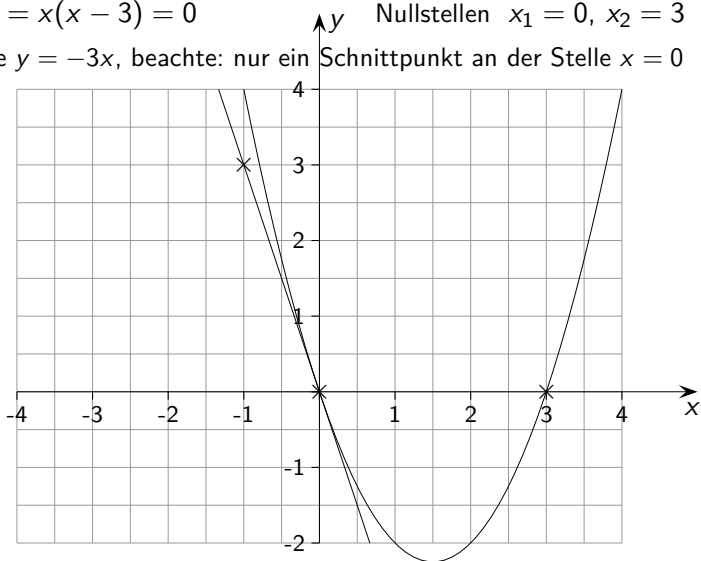

Zeichne die Parabel  $y = x^2 - 3x$ .

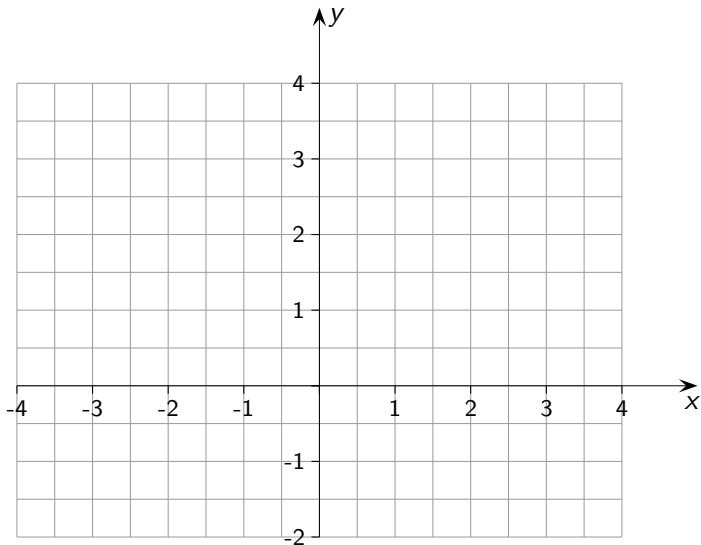

$$x^2 - 3x = x(x - 3) = 0$$

Tangente  $y = -3x$ , beachte: nur ein Schnittpunkt an der Stelle  $x = 0$

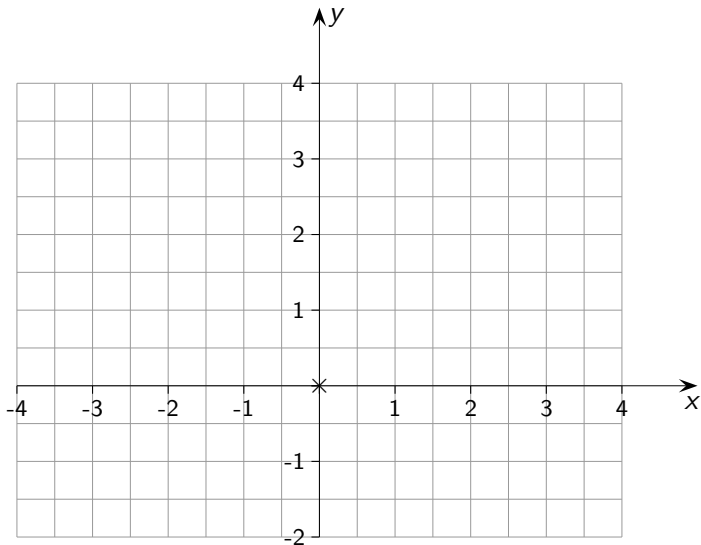

Nullstellen  $x_1 = 0, x_2 = 3$

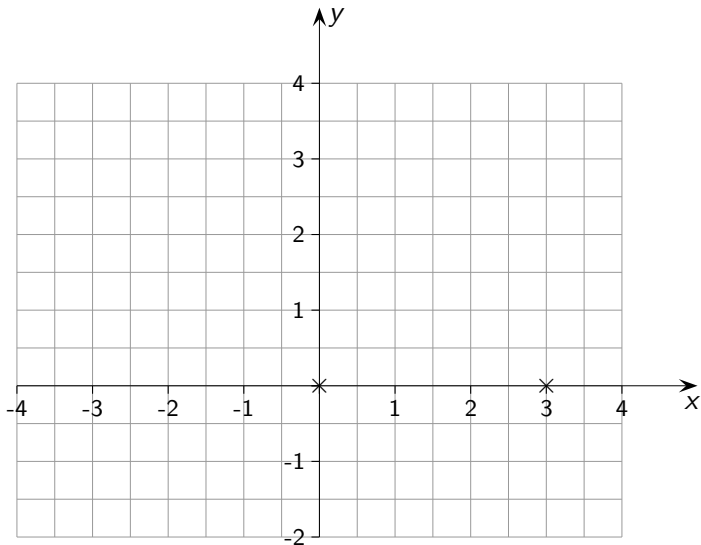

Zeichne die Parabel  $y = -x^2 + 3x$ .

Zeichne die Parabel  $y = -x^2 + 3x$ .

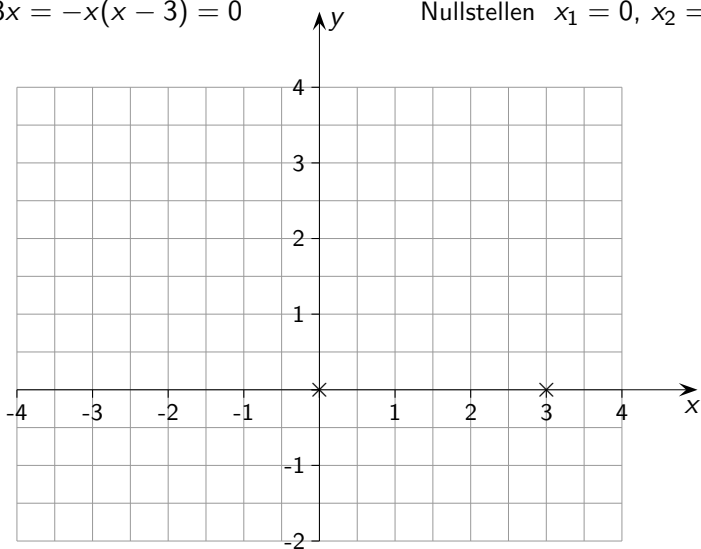

Zeichne die Parabel  $y = -x^2 + 3x$ .

Zeichne die Parabel  $y = -x^2 + 3x$ .

$$-x^2 + 3x = -x(x - 3) = 0$$

Nullstellen  $x_1 = 0, x_2 = 3$

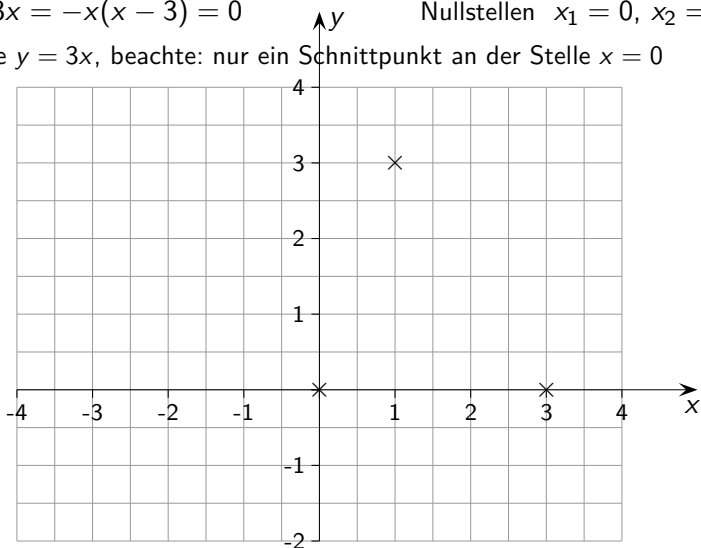

Zeichne die Parabel  $y = -x^2 + 3x$ .

$$-x^2 + 3x = -x(x - 3) = 0$$

Nullstellen  $x_1 = 0$ ,  $x_2 = 3$

Tangente  $y = 3x$ , beachte: nur ein Schnittpunkt an der Stelle  $x = 0$

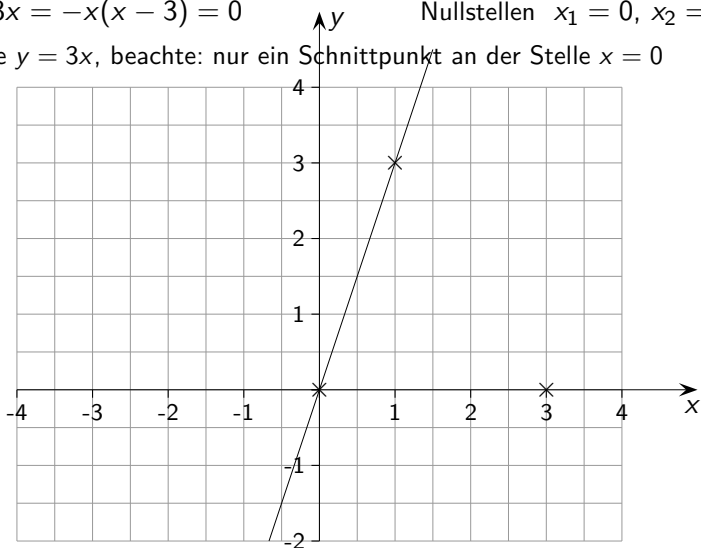

Zeichne die Parabel  $y = -x^2 + 3x$ .

$$-x^2 + 3x = -x(x - 3) = 0$$

Nullstellen  $x_1 = 0, x_2 = 3$

Tangente  $y = 3x$ , beachte: nur ein Schnittpunkt an der Stelle  $x = 0$

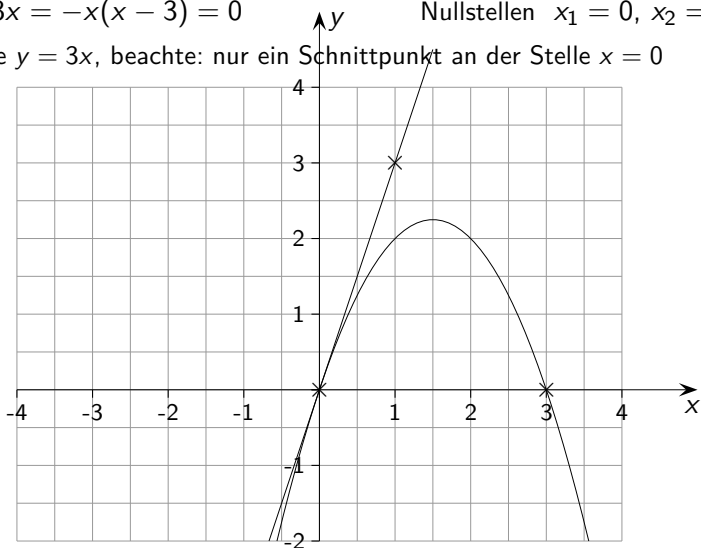

Zeichne die Parabel  $y = -x^2 + 3x$ .

$$-x^2 + 3x = -x(x - 3) = 0$$

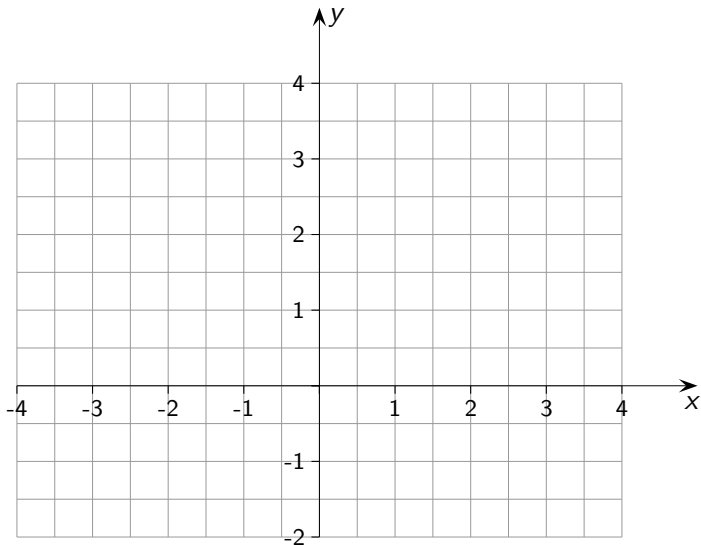

Nullstellen  $x_1 = 0, x_2 = 3$

Tangente  $y = 3x$ , beachte: nur ein Schnittpunkt an der Stelle  $x = 0$

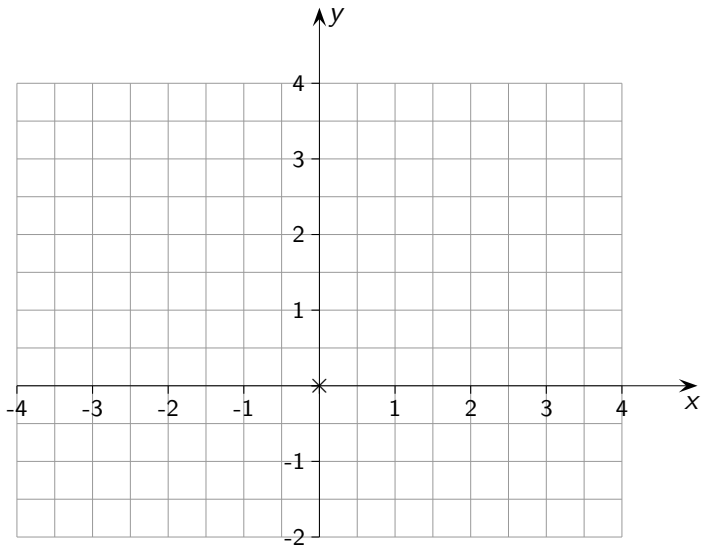

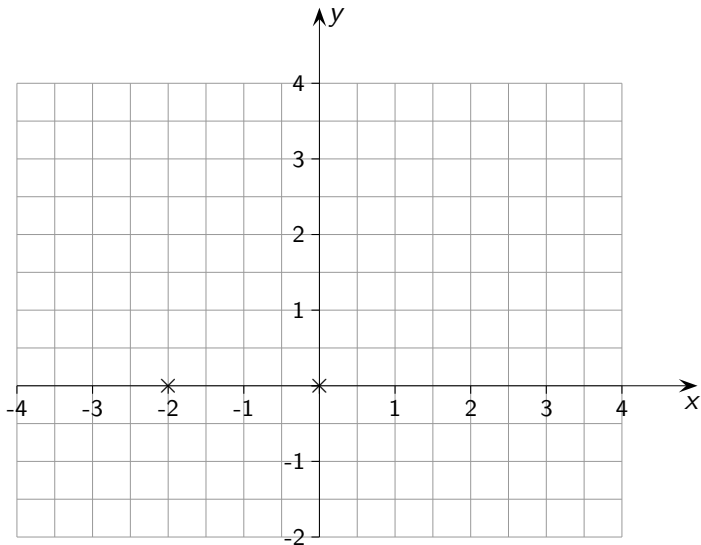

Zeichne die Parabel  $y = x^2 + 2x$ .

Zeichne die Parabel  $y = x^2 + 2x$ .

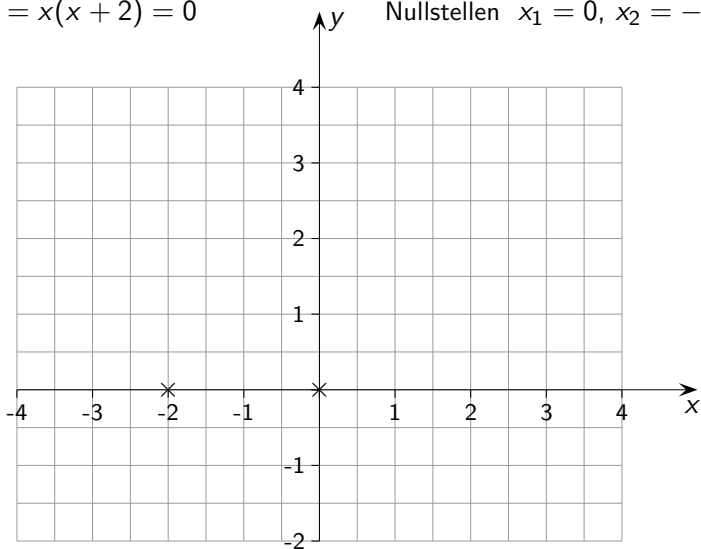

Zeichne die Parabel  $y = x^2 + 2x$ .

Zeichne die Parabel  $y = x^2 + 2x$ .

$$x^2 + 2x = x(x + 2) = 0$$

Nullstellen  $x_1 = 0$ ,  $x_2 = -2$

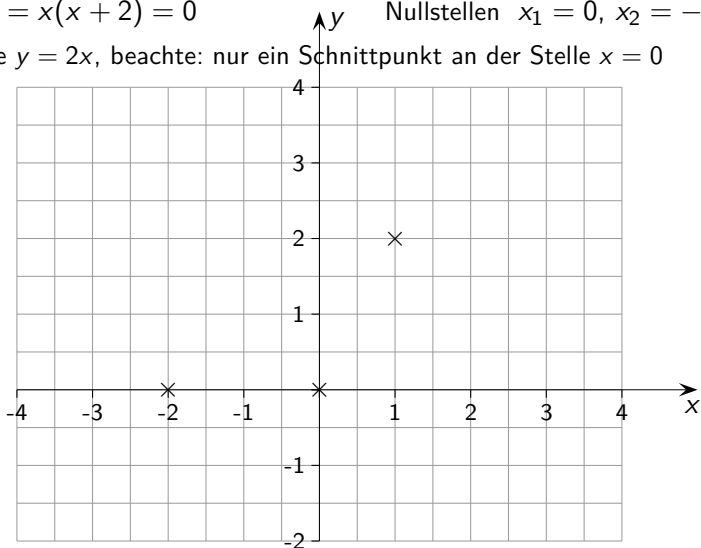

Zeichne die Parabel  $y = x^2 + 2x$ .

$$x^2 + 2x = x(x + 2) = 0$$

Tangente  $y = 2x$ , beachte: nur ein Schnittpunkt an der Stelle  $x = 0$

Nullstellen  $x_1 = 0, x_2 = -2$

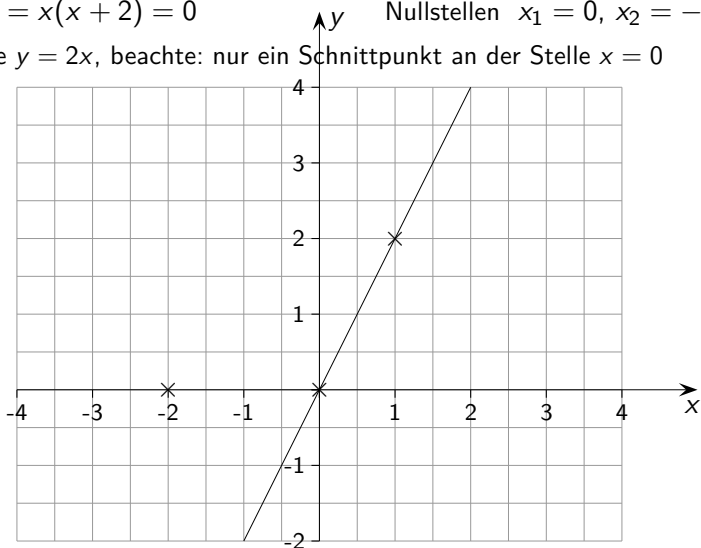

Zeichne die Parabel  $y = x^2 + 2x$ .

$$x^2 + 2x = x(x + 2) = 0$$

Tangente  $y = 2x$ , beachte: nur ein Schnittpunkt an der Stelle  $x = 0$

Nullstellen  $x_1 = 0, x_2 = -2$

Zeichne die Parabel  $y = x^2 + 2x$ .

$$x^2 + 2x = x(x + 2) = 0$$

Tangente  $y = 2x$ , beachte: nur ein Schnittpunkt an der Stelle  $x = 0$

Nullstellen  $x_1 = 0, x_2 = -2$
